

March 2021

Notes to support the table

The industry is committed to reporting as quickly as practically possible, some one month in arrears.

"*Monthly mortality (%)*" = the percentage of fish lost on each farm within each month. This is reported as a percentage of the total number of fish on the farm each month. This is the measure of mortality used by the Scottish Government's Fish Health Inspectorate when assessing the health of the fish on the farm.

Further analysis shows that the overall monthly mortality for the industry was:

1.35% in January	1.49% in October	1.36% in July 2019	1.17% in April 2020	1.17% in January 2021
0.94% in February	1.07% in November	1.30% in August 2019	0.92% in May 2020	1.08% in February 2021
1.49% in March	1.03% in December	2.24% in September 2019	0.72% in June 2020	1.14% in March 2021
1.32% in April	1.15% in January 2019	2.79% in October 2019	1.59% in July 2020	
0.76% in May	1.05% in February 2019	1.76% in November 2019	2.64% in August 2020	
0.54% in June	0.95% in March 2019	1.10% in December 2019	1.78% in September 2020	
1.05% in July	1.33% in April 2019	1.26% in January 2020	2.07% in October 2020	
1.55% in August	0.83% in May 2019	0.95% in February 2020	1.48% in November 2020	
1.57% in September	1.06% in June 2019	1.13% in March 2020	0.94% in December 2020	

"*Cumulative mortality over full production cycle (%)*" = the percentage of fish that have died on a farm during the entire production cycle, given as a percentage of the total number of fish that were initially stocked on the farm. It can only be reported once the entire farm has been fully harvested and fallowed.

Cumulative mortality refers to mortality over the entire production cycle. Therefore, an industry-wide figure can only be calculated once all fish from a specific generation or year class have been harvested. It usually takes 2 years to rear a salmon to harvest.

"Fallow" = the farm was fallow or empty throughout the entire reporting month.

"Farm stocked in Mar." = the farm was fallow or empty at the start of the month but was restocked during the month.

"Farm fallowed in Mar." = the farm was stocked at the start of the month but became fallow or empty during that month.

"In production" = the farm is stocked and a cumulative mortality figure will be reported once all fish are harvested.

"Farm fallowed - fish not harvested" = The farm became fallow, but not because the fish were harvested. e.g. the fish may have been moved to another farm.

Mortality Categories

Mortality categories presented in this report align with those of the Scottish Government's Farmed Fish Health Framework initiative.

Smolt and Transfer - *Mortalities as a result of transfer or complications with smoltification.*

Predation - *Mortalities primarily due to seal or bird attacks as well as other predator related losses.*

Jellyfish / plankton - *Physical algal damage and jellyfish stings.*

Environment - *Physico-chemical impacts (i.e., not biological).*

Viral disease - *All mortalities related to viral challenges.*

Bacterial disease - *All mortalities related to bacterial challenges.*

Handling - *Damage resulting from essential physical handling.*

Sea lice related - *Any mortalities that are due to sea lice management e.g., treatments.*

Gill health related - *Any mortalities linked to gill health or gill health management e.g., treatments.*

Other - *Any other cause of mortality.*

Company	Farm	Monthly mortality (%)	Notes	Cumulative mortality over full production cycle (%)
Cooke Aquaculture (Scotland)	Balta Isle	0.2		In production
